

Patient scheduling made **smooth.**

A better
patient
experience

- Automatically suggests optimal patient appointment slots based on staff and resource availability
- Knows staff and resource requirements by exam type
- Highlights appointments affected by staff changes and recommends appropriate adjustments
- Enhances RIS or works standalone
- Provides portals for easy viewing of schedules by patients

Know that you have the right staff and resources available for your patients... at the right time.

healthcare workflow software

Do you spend too much time creating a schedule for your patients? Do your patients sometimes complain about scheduling that doesn't account for their requests? Could you benefit from a single system for tracking all items related to patient scheduling, including special requests? Are you frequently adjusting your schedule to account for manual errors? Can your patients view their schedules on mobile devices?

Momentum Patient Scheduler is the only intuitive, automated radiology patient scheduling software solution capable of accounting for availability of staff, resources, complex rule-sets, and exceptions. Momentum predictably assures availability of resources, simultaneously taking into account patient preferences, utilization, and specialized needs when scheduling appointments.

What separates Momentum from other automated patient scheduling tools is our unique algorithm. The back-end rules engine is comprehensive and powerful when compared with other patient scheduling software on the market, providing hospitals and imaging centers with heightened control over the scheduling process, while at the same time minimizing the resources required for schedule creation and management. Additional benefits of Momentum include higher study arrival and participation rates, increased productivity for staff members, and higher patient satisfaction.

Features

- Scheduling algorithms based on your own scheduling rules and policies, as well as patient preferences, streamline previously complicated processes while creating higher patient satisfaction
- Automatically suggests optimal patient appointment slots based on staff and resource availability
- Highlights appointments affected by staff changes and recommends the best alternatives
- Library of reports for optimizing performance with several dynamic views that make reviewing schedules smooth
- Supports practices of all sizes and complexity
- Enhances RIS or works stand alone
- Hosted solution accessible via web browser
- Changes can be made in real time
- Differentiated customer support
- Utilizes Momentum Radiologist and Staff Scheduler information for better resource planning

Enhance your patient's appointment scheduling experience while automating your own scheduling process, all with Momentum. Contact us today.
